# ECO OUTDOOR APPROACH TO SUSTAINABILITY

---

Eco Outdoor's natural stone product is all inherently sustainable, offers an enduring life cycle, a high degree of durability, is easy to maintain and to recycle. What's more, because it's a natural material that comes from the ground, it requires little fabrication or handling and is delivered in a state that is very close to its natural form.

Moreover, natural stone is non-toxic and carries a long lifecycle, which prevents frequent replacements and reduces waste. When replaced, the waste consists of low volume, environmentally-stable material, which reduces environmental impact.

Likewise, when natural stone is quarried and fabricated, there are no unsafe chemicals used and, because it is part of the earth, it bears no man-made substances that are harmful to the environment or the health of people.

As you can imagine, measuring genuine environmental impact is a complex and lengthy process, especially in an industry where very little testing has been done to date.

The process of accurately identifying and measuring our impact is an ongoing one. In the meantime, our plan is to control what we can, offset where we can, and we work with our partners to ensure that we continue to work sustainably wherever possible.

In the meantime, if you have any particular concerns relating to a product or a specific job, please give us a call and we'll do our best to provide you with the information we have so far.

Whilst we maintain environmentally-friendly practices throughout our operations, we also recognize that the conversation around sustainable building is an ongoing one. If you'd like to talk to us more about this, please don't hesitate to get in touch.
